

## **VESSEL PERFORMANCE MONITORING POLICY**

The Company is dedicated to ensuring that all vessels comply with both Charter Party requirements and Company's own standards of performance including relevant Safety, Environmental, Health and Quality standards.

This is achieved by ensuring a constant flow of standard coded communication from the vessel to the office in accordance with relevant procedures.

This data is constantly monitored and if necessary investigated by the relevant departments.

A computer and manual analysis is provided on completion of each voyage leg and/or at any moment as necessary.

For sustained control processes, statistical techniques are applied in operations where they contribute to process control and quality improvements.

Any incidents, which may adversely affect the vessel's performance, seaworthiness and/or standard of service are to be reported and dealt with accordingly.
